JUMO CTI-500

Inductive Conductivity/Concentration and Temperature Transmitter with switch contacts

Type 202755

Brief description

The instrument is used for the measurement/control of conductivity or concentration in liquid media. It is particularly suitable for application in media where severe deposits of dirt, oil, grease or gypsum/lime precipitates are to be expected. The integrated temperature measurement enables fast and accurate temperature compensation, which is of special importance when measuring conductivity. Additional functions permit the combined changeover of measuring range and temperature coefficient.

Two built-in switching outputs can be freely programmed to monitor conductivity/concentration and/or temperature limits. It is also possible to assign alarm and control functions (dilution).

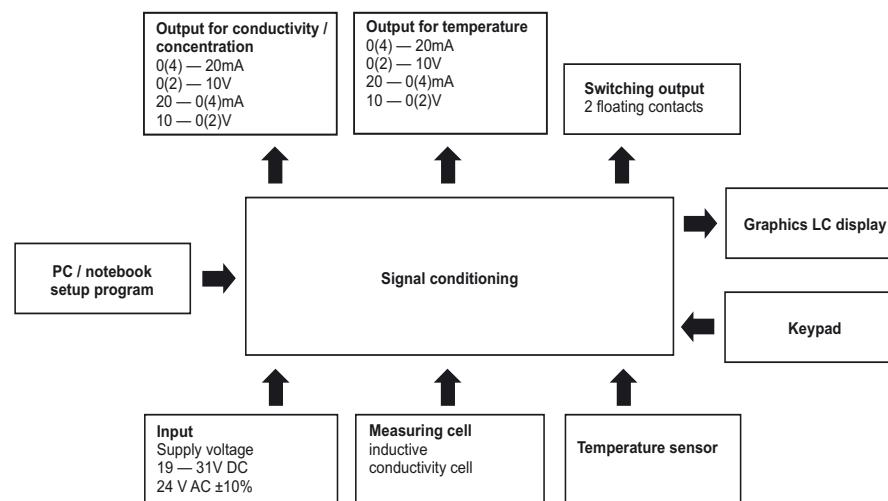

The instrument is operated either from the membrane keypad and plain-text graphics display (operator language can be changed over) or through the user-friendly PC setup program. The display can be read off by simply rotating the housing cover. This applies to the installation both in horizontally and vertically arranged pipes. By using the setup program, the instrument configuration data can be saved for plant documentation and printed out. To prevent any tampering, the instrument can also be supplied without keypad or display. In this case, the setup program is needed for programming.

The JUMO CTI-500 is available either as a combined unit (transmitter and measuring cell together in one unit) or as a split version (transmitter and cell connected by cable). The split version is particularly suitable for plant subjected to strong vibration and/or significant heat radiation at the measurement point, or for installation on sites that are difficult to access. Immersion models up to 2000 mm are available for application in open containers or sluices.

Typical areas of application: Freshwater and wastewater engineering, air conditioning systems and cooling tower monitoring (dilution control), rinsing baths (e.g. monitoring electroplating baths), inlet and final checks in factory water treatment plant, concentration monitoring, vehicle wash plant, etc.

Block structure

Key features

- Activation of up to four ranges
- Activation of up to four temperature coefficients
- Concentration measurement of
 - caustic soda NaOH
 - nitric acid HNO₃
 - a freely definable curve (through the setup program)
- Fast-response temperature sensor
- Temperature compensation
 - linear
 - natural water
 - individual characteristic (learning function)
- Operation
 - via keypad and LC display
 - through setup program
- Operator languages: English, French, German, Italian, Dutch, Spanish, Polish, Portuguese, Russian, Swedish
- By using the setup program:
 - user-friendly programming
 - plant documentation
- Learning function for the temperature coefficient
- Individual characteristic for concentration indication
- Dilution control

Functional description

The inductive measurement method permits largely maintenance-free acquisition of the specific conductivity, even in the toughest media conditions. As opposed to the conductive measurement method, problems such as electrode decomposition and polarization do not occur.

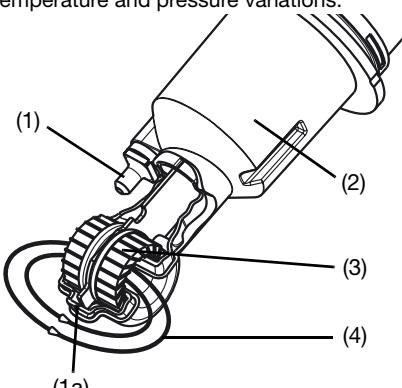

The conductivity is measured using an inductive probe. A sinusoidal a.c. voltage feeds the transmitting coil. Depending on the conductivity of the liquid to be measured, a current is induced in the receiver coil. The current is proportional to the conductivity of the medium.

Instrument description

Measuring cell

The measuring cell consists of a hermetically sealed polypropylene (PP) or polyvinylidenefluoride (PVDF) body inside which the two measurement coils are arranged. A bore in the measuring cell enables the medium to flow through. The measurement principle entails an inevitable electrical isolation between the sample medium and the signal output.

The measuring cell is largely unaffected by temperature and pressure variations.

Exposed temperature sensor

The sensor (in a stainless steel sleeve) exhibits a very fast response to temperature variations. This is especially important for CIP processes (phase separation).

Internal temperature sensor

The sensor is integrated in the PP body. This construction ensures that no metal parts come into contact with the sample medium (important with corrosive media). However, temperature acquisition is somewhat slower here.

Temperature compensation

Since conductivity largely depends on the temperature of the medium, it is usually necessary to compensate for the temperature effect.

The instrument allows both linear and non-linear temperature compensation.

If required, temperature compensation can be switched off, for example, when the temperature conditions on the measurement site are stable or when temperature compensation is carried out in the software, in external evaluation devices (PLC or similar).

Process connections

To cover a wide variety of applications, the instrument can be supplied with different process connections (also as an immersion model), see dimensions.

Installation at the measurement point

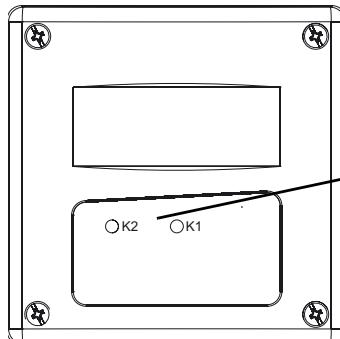

The operating position is generally unrestricted. However, it is essential to ensure that there is a continuous exchange of the sample liquid in the flow channel.

Transmitter

The CTI-500 transmitter has been designed for use on site. A rugged housing protects the electronics and the electrical connections from corrosive environmental conditions (IP67).

A vent screw with a PTFE membrane prevents condensation.

Displays and controls

Version without a display
 Operation/configuration through the setup program only

Operation

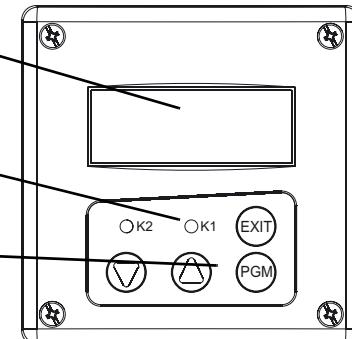

The JUMO CTI-500 can be operated either from the instrument keys and the graphics LC display and/or through the setup program from a PC or laptop.

The instrument can be secured against unauthorized alteration by a password.

Functions of the outputs

Analog outputs

- One analog signal output for conductivity/concentration and temperature respectively.
- The analog output signals are freely scalable (range start and end values).
- The response of the analog outputs to over/underrange or alarm can be programmed.
- Simulation of the signal output:
The analog signal outputs can be freely set in the manual mode.
Application: "Dry-run" start-up of the plant, trouble-shooting, servicing.

Version with a display
 Operation/configuration from the keys or through the setup program

- (1) Graphics LC display
- (2) LEDs for the switching status indication of the outputs K1 and K2
- (3) Keys

Graphics LC display

- (1) Switching output 1 or 2 is active
- (2) Binary input 1 or 2 is operated
- (3) Keypad is inhibited
- (4) Alarm has been activated
- (5) Instrument is in manual mode
- (6) Instrument status
- (7) Temperature of medium
- (8) Conductivity measurement
- (9) Unit of conductivity measurement

Switching outputs

The instrument features two floating switching outputs (solid-state relays) as standard.

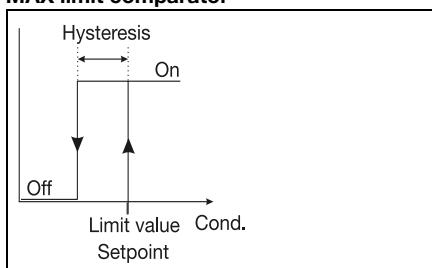

These can be used freely for monitoring the conductivity/concentration or the temperature.

The following functions can be assigned:

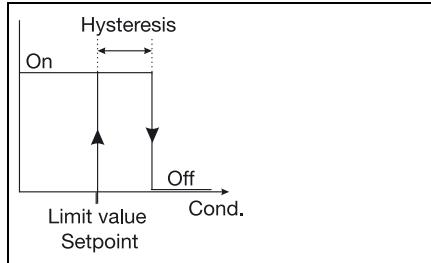

- Limit monitoring (MAX. or MIN. limit comparator) with programmable hysteresis
- Pulse function (the output switches briefly on reaching the switching point, then opens again).
- Pull-in and drop-out delay
- Inverted switching outputs
- Response to overrange/underrange or with activated measuring circuit monitoring (pull-in/drop-out).
- "Calibration timer run down" signal.

Contact functions

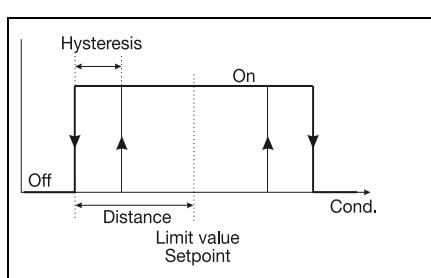

MAX limit comparator

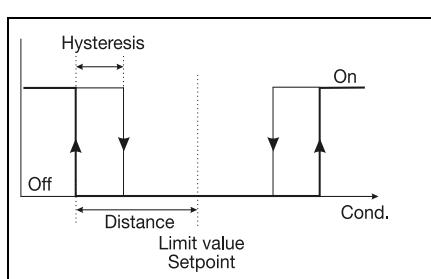

MIN limit comparator

Alarm window 1

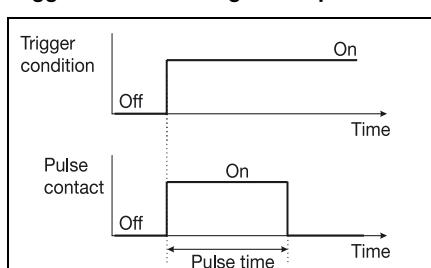

Alarm window 2

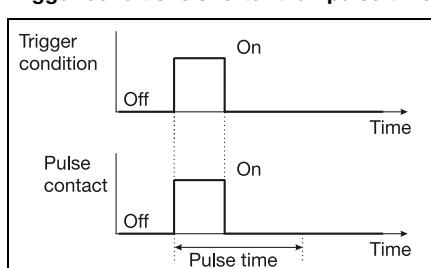

Pulse contact

Trigger conditions longer than pulse time

Pulse contact

Trigger conditions shorter than pulse time

Binary inputs

The two binary inputs serve to implement the following functions:

- Key inhibit
- HOLD mode
- 4-fold range changeover
- 4-fold temperature coefficient changeover
- Initiation of dilution function and biocide dosing

Special functions

■ The learning function for the temperature coefficient enables exact measurement of media with a non-linear characteristic. During a temperature change, the instrument "learns" the temperature coefficient of the present medium and stores the profile. The stored values then enable the correct indication of the temperature-compensated conductivity.

■ Individual characteristic for concentration indication. An individual characteristic with 20 interpolation points can be entered through the setup program. This function can be used to generate special characteristics for specific media (e.g. special detergents). This results in correct measurements that contribute to assuring the quality and saving costs.

■ Dilution control Various processes that find their application in wet cooling towers are stored as sequence control (biocide dosing and subsequent inhibiting of dilution). Additional information can be found in the operating manual.

■ Calibration timer The calibration timer draws your attention to a calibration schedule. This function is activated by entering a number of days, after which recalibration has to be carried out (plant or operator requirement).

¹ Not compensated for temperature

Note:

The overall tolerance is made up of the tolerance of the transmitter + the tolerance of the sensor.

Technical data

General

A/D converter

resolution: 15 bit
 sampling time: 500msec = 2 meas. per sec

Supply

For operation with SELV and PELV circuits.

As standard:

19 – 31 V DC (24 V DC nominal),
 the instrument incorporates reverse-polarity protection

ripple: < 5%

extra code 844:

24 V AC ±10%, 50 – 60 Hz

power consumption

with display: ≤ 3 W

power consumption

without display: ≤ 2.6 W

Rating of the solid-state relays

U < 50 V AC/DC

I ≤ 200 mA

Electrical connection

plug-in screw terminals 2.5 mm² or
 M12 plug/socket connectors

Display (option)

graphics LCD with background lighting;
 contrast is adjustable
 dimensions: 62 x 23 mm

Permissible ambient temp. (transmitter)

-5 to +50°C
 max. 93% rel. humidity, no condensation

Permissible storage temp. (transmitter)

-10 to +75°C
 max. 93% rel. humidity, no condensation

Enclosure protection (transmitter)

IP67

Housing

polyamide (PA)

Weight

depending on version and process connection
 approx. 0.3 – 2 kg

Conductivity/concentration transmitter

Concentration measurement

(implemented in the instrument software)

- NaOH (caustic soda)
 0 – 15 % by weight or 25 – 50 % by weight
- HNO₃ (nitric acid)
 0 – 25 % by weight or 36 – 82 % by weight
- customer-specific concentration curve, freely programmable through the setup program (see "special functions")

Calibration timer

adjustable: 0 – 999 days (0 = off)

Output signal for conductivity/concentration

0 – 10 V / 10 – 0 V
 2 – 10 V / 10 – 2 V
 0 – 20 mA / 20 – 0 mA
 4 – 20 mA / 20 – 0.4 mA

The output signal is freely scalable.

Burden

≤ 500Ω for current output
 ≥ 2kΩ for voltage output

Analog output with "Alarm"

Low (0 mA / 0 V / 3.4 mA / 1.4 V)

or

High (22.0 mA / 10.7 V)

or

a fixed setting

Measuring ranges

Four ranges can be selected. One of these ranges can be activated via an external switch or a PLC.

Temperature transmitter

Temperature acquisition

manually -200 to 25.0 to 150°C/F or automatically

Temperature measuring range

-200 to 150°C/F

Characteristic

linear

Accuracy

≤ 0.5% of measuring range

Ambient temperature error

≤ 0.1%/°C

Response time

with exposed temperature sensor
 t_{0.9} ≤ 6 sec

with internal temperature sensor
 t_{0.9} ≤ 2 min

Output signal for temperature

0 – 10 V / 10 – 0 V
 2 – 10 V / 10 – 2 V
 0 – 20 mA / 20 – 0 mA
 4 – 20 mA / 20 – 0.4 mA

The output signal is freely scalable within the range -20 to +200°C.

The sensor can be applied within the range -10 to +100°C.

Burden

≤ 500Ω for current output
 ≥ 2kΩ for voltage output

Order details: CTI-500 as "Head transmitter"

202755

(1) Basic type

JUMO CTI-500
 Inductive transmitter/ switching device for conductivity/
 concentration and temperature

(2) Basic type extensions

- | | |
|----|--|
| 10 | head transmitter without display/keypad ¹ |
| 15 | head transmitter with display/keypad |

(3) Process connection

- | | |
|---------|---|
| o o 168 | PVC union nut G1½A ^{2,6} |
| o o 169 | stainless steel union nut G1½A ² |
| o o 607 | screwed pipe fitting DN50, DIN 11 851(MK DN50, milk cone) |
| o o 617 | clamp connection 2½" ⁷ |
| o o 690 | SMS 2" |

(4) Immersion length

see dimensions

(5) Electrical connection

- | | |
|--------|---|
| o o 82 | cable glands |
| o o 83 | M12 plug/socket connectors (instead of the cable glands) ³ |
| o o 84 | two M16 cable glands and one blind grommet |

(6) Extra codes⁴

- | | |
|---------|---------------------------------|
| x x 000 | no extra code |
| o o 268 | internal temperature sensor |
| o o 768 | cell material PVDF ⁵ |
| o o 844 | supply 24 AC V ±10% |

x = standard

o = available as an option
